## Samsung note 8 multi window android 9

Hi Pie after upgrading, I can't find multi-window settings or combine apps in recent app windows. Where are these options? Long press the app icon at the top of the window in the recent apps section to see split screen and pop-up options. Send from my SM-N960U using Tapataalk reaction: bat0nas I don't know why anyone says you have to press and hold. All I have to do is tap on the icon and that menu will pop up. Oops... I was coming from a good locking point of view, but even there. Your right is a tap sent from my SM-N960U using tapataalk last edit: March 17, 2019 Hey ya'll, so after the recent update, there doesn't seem to be a multi-window option. Also, after the update, my internet stopped working. It turns out that the access point name has disappeared. The only way I've known is to call my carrier for me to figure it out. Has anyone else experienced this? Page 2 6 Samsung has long offered users the feature to run two apps simultaneously on their smartphone using the multi-window feature. But when you upgrade to Android Pie on your Galaxy smartphone, you may start to think that the multi-window feature no longer exists. Well, it does, but the procedure to launch the app in multi-window has changed in Android Pie. Up until Oreo, but you can use a specific app in split screen mode with another app by pressing the multi-window button displayed at the top of each app's card on the recent app screen. In one new UI for Android Pie, Samsung has switched to the way Google adopts on stock Android. This method has also changed the pop-up view feature, which allows users to open apps in a small pop-up window that they can move around on the screen. So how do I open an app in a multi-window or pop-up view in Android Pie? Open the app you want to run in split screen or pop-up view, and tap the recent key next to the home button to display the multitasking screen. Tap the icon above the app's card and select the relevant option from the list that appears. For visual guides, check out the GIF animation below (you need to click/tap on the image to play it). This is not the only change that one UI and Android pie will bring to galaxy smartphones. See how the One UI compares visually to Android Oreo's Samsung Experience UI, and also see what new features you can expect from pie updates on Galaxy devices. Join the discussion Highlight Highlight Highlight Highlight Highlights Highlighted Highlighted Highlighted Highlighted Accessibility Resource Center Skip to main content Learn how to manage multitasking and switch windows on your Samsung Galaxy Note 8. On this page: Multitasking On/Off Multitasking Window From the On/Off Multitasking Home screen, swipe to an empty location to open the app tray. Tap Multi-Window &gt; Advanced Features. Move slider to On if: Recently used button (tap text to open settings) Snap display pop-up action Switch the window from the home screen and tap the recent window key to the bottom left corner. If necessary, swipe up or down in the Multi window to access the application you want. Tap the window you want to open the application. Samsung Galaxy Note 8 has the feature that allows you to view multiple apps in split-screen multi-window mode. Here's how to enable this: Open the app you want to use as Android Pie normally. Note: Your app must be an app that supports multi-screen. Otherwise, you'll see a message that the app doesn't support split-screen view. Tap the Recent button. A list of running apps is displayed. If you want to explore between listed apps, swipe left or right. Tap the app icon for the first app you want to use in split-screen view. A menu appears where you can select Open in split screen view. An X circle appears at the top of the screen. Ignore it for now. Select the app that you want to use in the second window. You can select an app card from the Recents list or open the app from the launcher. Both apps will now appear in split-screen view. Android Oreo Split window view opens the app you want to use as usual. Note: Your app must be an app that supports multi-screen. Otherwise, you'll see a message that the app doesn't support split-screen view. Tap the Recent button. A list of running apps is displayed. Swipe up or down to explore between listed apps. Tap the multi-window icon to the left of X in the app window. Open in the top half of the screen. Note: Apps that don't have a multi-window icon can't run in split-screen mode. Tap the multi-window icon (which looks like a = symbol) in the upper right corner of the app. Select another app that runs both apps in split-screen multi-window mode. Tap the circle between the windows to access additional multi-window options. Make sure you have two apps running in split-screen mode that end split screens, then tap the middle of the middle bar to split them. A menu appears that you can select X to exit split-screen mode. It may take some attempts. Open the app you want to use as usual in the modifiable window mode. Tap and hold the Recent button. You're seeing a white circle with X attached to it. Tap on it to exit multi-window mode. You can drag corners to increase or reduce their size, or drag windows around the screen. FAQ Why can't I use split screen in some apps? There is currently no workaround for this. The Accessibility Resource Center skips to the main content, so one UI/Android 9 (Pie) comes a multitasking downgrade. On Android 8, you can press the App Switch button to get into split screen, and in one simple step, it was perfect for running YouTube and browsing Twitter/reddit at the same time. New one UI/pie requires more than one Tap the task switcher, swipe back to the current app, and the top tap split screen icon. This can be fixed with this app, root or add needed. settings can ignore the Hide System Navigation Bar setting in the Hide System Navigation Bar setting in the Actions settings of the app that removed all Quick Swipe actions in the app so as not to conflict with native swipes. So this works. Well.
